The age of onset of non-congenital inherited eye disease varies in different breeds and between individual dogs. It is therefore important to follow any advice given at the time of this examination with regard to the necessity for and frequency of eye examination under the Scheme.

'Clinically affected' signifies that there is visible evidence of the inherited eye disease(s) specified, whereas 'clinically unaffected' signifies that there is no such evidence.

I have today examined the above animal under the BVA/KC/ISDS Eye Scheme with the results as shown
